The methods of the invention are useful in the diagnosis or treatment of cancers such as neural cancers (e.g., neuroblastoma), breast cancer, colon cancer, liver tumours and germ cell tumours. The CHD5 protein, CHD5 nucleic acids and anti-CHD5 antibodies are useful as research tools to identify other proteins that are intimately involved in chromatin unwinding, DNA repair and recombination, and transcriptional

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0
```

The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcriptome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridisting selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The

                           The invention relates to an isolated polynucleotide comprising a sequence selected from 183 human DNA sequences (appearing as ABK70130-ABK70312), or their fragments, homologues, variants or complements and their encoded polypeptides. Also included are an expression vector comprising the polynucleotide operably linked to an expression control sequence, a host cell transformed or transfected with an expression vector of; an isolated antibody, or its antigen-binding fragment that specifically binds to the polypeptide; a method for detecting the presence of a cancer in a patient

ABN27253 to ABN59589 represent oligonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

    and pathology-specific genes such as those genes only expressed
specific tissue under a specific pathological condition; to detect

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            oligonuclectide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised minitranscriptome under a particular libraries to detect transcripts of a sub-transcriptome under a particular biological or pathological state, and so allowing the detection of tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2002-372001/40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-SEP-2001; 2001WO-US042232
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-MAR-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antigen, designated Mi-2. The sequence numbering given in the specification starts at nucleotide 91, i.e. the 5' UTR is omitted, as well as the 'A' of the first ATG start codon. The protein is hydrophilic, acidic and protruding regions of the protein are characteristic of helicases. The gene corresponding to this CDNA was localised to chromosome 12 (12p13). The DNA can be used for the recombinant production of Mi-2 which is used for, e.g. the differential diagnosis of collagen diseases, esp. dermatomyositis, e.g. by immunoassay or Western blotting

Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change expression of a gene of a signature gene Bet.

Claim 1; SEQ ID NO 2747; 44pp; English.

neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's The present invention describes a method (M1) for screening for an

The nucleic acids, polypeptides and agents are useful for treating cartilaginous tissue degeneration conditions such as osteoarthritis, rheumatoid arthritis, gout arthritis, adjuvant arthritis, arthritis deformans, infectious arthritis, arthritis deformans, infectious arthritis, or osterochondrosis. The present sequence is a CDNA from a known gene differentially expressed in developing mesenchymal cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
```

The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified DNA chip analysis as given in the specification, and comparing the

à

expression

expression

unactivated

Claim

Detecting granulocyte activation by detecting differential expression genes associated with granulocyte activation, which serves as diagnost markers that is useful for monitoring disease states and drug toxicity

xpression of singular diagnostic glassicity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            pathway modulating agents. The method involves contacting an assay system comprising purified chromatin organisation modifier (chromo) domain helicase DNA binding proteins (CHD), nucleic acids, their functionally active fragments or derivatives, with a test agent under conditions where, but for the presence of the test agent, the system provides a reference activity. The methods are useful for identifying modulators of the p53 pathway as therapeutic targets for disorders associated with defective p53 function, such as angiogenic disorders, apoptotic disorders or cell proliferative disorders, e.g. cancer. The modulators are useful as research reagents, diagnostics and therapeutics. The invention is also useful in gene therapy. The present sequence is human CHD DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pathway modulating agents. The method involves contacting an assay system comprising purified chromatin organisation modifier (chromo) domain helicase DNA binding proteins (CHD), nucleic acids, their functionally active fragments or derivatives, with a test agent under conditions where, but for the presence of the test agent, the system provides a reference activity. The methods are useful for identifying modulators of the p53 pathway as therapeutic targets for disorders associated with defective p53 function, such as angiogenic disorders, apoptotic disorders or cell proliferative disorders, e.g. cancer. The modulators are useful as research reagents, diagnostics and therapeutics. The invention is also

The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a mRNA reference sequence for a 50 mer oligonucleotide marker for diagnosi and monitoring of allograft rejection and other disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, canentactic/chemokinetic activity, canentactic/chemokinetic activity, haemostatic and thrombolytic activity, canentactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and C.N.S disorders.                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an isolated polynucleotide (I) comprising a fully defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041, 1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as given in the specification, its translated or protein coding portion, its extracellular portion or its active domain. The GPCR-like polypeptides and polynucleotides are useful for the treatment of diseases of ophthalmic, neurological, immunological and nephritic systems. They may also be used to treat hormonal dysfunction, cancer, atherosclerosis and dishbers.
                                                                                                                                                                                                                                                                                   Sequence 6475 BP; 1760 A; 1528 C; 1822
                                                                                                                                                                                                                                                                                                                                    diabetes. The antibodies are useful for detecting or quantitating the polypeptide in tissue. The polypeptides can also be used as molecular weight markers and as a food supplement. This sequence represents a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New G-protein-coupled receptor-like polypeptides and polynucleotides, useful for treating diseases of ophthalmic, neurological, immunologic and nephritic systems and hormonal dysfunction, cancer, atheroscleros and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ophthalmological; immunomodulatory; cytostatic; antiatherosclerotic; antidiabetic; GPCR-like protein; ophthalmic disorder; neurological disorder; mmunological disorder; nephritic disorder; hormonal dysfunction; cancer; atherosclerosis; diabetes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21-JAN-2000; 2000US-00488725.

The polynucleotide is useful for treating diseases e.g., cancer or neurodegenerative diseases and many others listed in the specification. The present sequence represents a novel human cDNA. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO

                                                                                                                                                                                                                                    in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue sample indicates the expression of the sarcoma. The method of the invention has cyrostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

Clone L1 was used to screen sera from 40 patients. The CDNA was expressed. The insert was 1.1 kb and includes a single long open reading frame spanning the entire insert, in phase with beta galactosidase. Since there are no start or stop codons, the insert does not contain the entire gene. The clone may be used as a DNA probe to isolate DNA encoding additional portions of the human antigens. This DNA and the protein encoded by it may be used in immunodiagnostic assays to identify patients expressing anti-Mi-2 autoantibodies, and to diagnose dermatomyositis. See also AAQ22729,30.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A human thrombocyte lambda gt 11 expression library was expressed in E. coli Y1090 and was screened with serum from a deratomyositis patient. This serum had previously been found to only contain anti- Mi-2 autoantibodies. A CDNA clone L1 was selected that expressed a protein which reacted with the anti-Mi-2 serum but not with the sera from normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1053 BP; 265 A; 256 C; 341 G; 191 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of human antigens Mi-2 and PM-Sc1, and the polynucleotide sequences encoding them. The human Mi-2 or PM-Sc1 proteins or a portion (at least one epitope) of them may be used in assays for diagnosing dermatomyositis, polymyositis or myositis-sclerosis overlap disorders. The present sequence encodes human Mi-2

(I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a composition for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastazed in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (1) is also useful as a pharmacodyanamic or pharmacogenomic marker

CC modulating agent, by contacting an assay system comprising a purified HM CC polypeptide (human orthologue of genes that modify the p53 pathway in CC Drosophila) or nucleic acid with a test agent under conditions, where but CC activity, and detecting a test agent, the system provides a reference CC activity, and detecting a test agent, biased activity of the assay system. CC Also included are modulating (M2) a p53 pathway of a cell (comprising CC contacting a cell defective in p53 function with a candidate modulator that specifically binds to a HM polypeptide comprising (M3) a p53 pathway of a gent that cC specifically binds an HM polypeptide comparising (M3) a p53 pathway of a disease in a patient (comprising contacting the cell with an agent that CC specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) CC a disease in a patient (comparising the sample with a probe for HM CC expression; (c) comparing the results with a probe for HM CC expression; (c) comparing the results with a probe for HM comparison indicates a likelihood disease). (M1) is useful CC in a patient, where the cancer has greater than 25 * expression level. CC in a patient, where the cancer has greater than 25 * expression level. CC defects in the p53 pathway. Buthway apolyotic or cell codefects in the p53 pathway. Buthway of a cell, thus restoring CC the p53 function of the cell, so that the cell cycle. (M2) and (M3) are useful in a variety of diagnostic and CC therapeutic progression through the cell cycle. (M2) and (M3) are useful or treating defects in the p53 pathway such as angiogenic, also useful for treating defects in the p53 pathway such as angiogenic, concertion activity and disorders. The present sequence is an HM cCC ancell proliferation disorders. The present sequence is an HM cCC ancell proliferation disorders. The present sequence is an HM cCC ancell proliferation disorders.
                                                                                                                                                                                                                                                                                                                        Query Match

                                                              The present invention relates to antiangiogenic pharmaceutical compositions. The compositions comprise, as active ingredient, one or more of: nucleic acid (I; ADI26740-ADI26744 and ADI26766-ADI26769) from compositions of the expression of which is induced by an angiogenic agent, or its complement or fragment; polypeptide (II; ADI2679-ADI26793) able to inhibit and ADI2679-ADI26793 and Expression of (I); or an antibody (Ab) that binds (II). The compositions are used for treating a wide range of angiogenic diseases: tumour care used for treating a wide range of angiogenic diseases: tumour care used for treating a wide range of angiogenic diseases: tumour care used for treating a wide range of angiogenic diseases: crohn disease; atheroscilerosis; ovarian hyperstimulation; psoriasis; endometriosis associated with neovascularization; restenosis (arterial or after balloon angioplasty); overgrowth of cells in wound healing; peripheral vascular thrombophlebitis; lymphedema; ischaemia; angina; myocardial infarct; thrombophlebitis; lymphedema; ischaemia; angina; myocardial infarct; convenie heart disease; (congestive) cardiac insufficiency; age-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic; ophthalmological; Antiarthritic; Antirheumatic; Antiinflammatory; Antiarteriosclerotic; Antipaoriatic; Gynaecological; Vasotropic; Vulnerary; Hypotensive; Antianginal; Cardiant; Osteopathic; gene therapy; antiangiogenic; tumour vascularisation; retinopathy; rheumatoid arthritis; Crohn disease; atherosclerosis; neovascularization; ovarian hyperstimulation; psoriasis; endometriosis; neovascularization; restenosis; cardiovascular disease; hypertension; Raynaud disease;
                                  muscular degeneration and osteoporosis. This sequence chromodomain helicase DNA binding protein 3 (CHD3).
                                                                                                                                                                                                                                                                                                                                                                                                                      Antiangiogenic composition, useful for treating e.g. tumors, connew angiogenesis-related nucleic acids or related polypeptides, antibodies or antisense sequences.
                                                                                                                                                                                                                                                                                                                                                                                     Claim

The present invention relates to antiangiogenic pharmaceutical compositions. The compositions comprise, as active ingredient, one or more of: nucleic acid (I, ADI26740-ADI26744 and ADI26766-ADI26769) from an endothelial cell gene the expression of which is induced by an angiogenic agent, or its complement or fragment; polypeptide (II; ADI26745-ADI26749 and ADI26770-ADI26773) encoded by (I), or its fragment; an antisense nucleic acid (III; ADI26750-ADI26753) able to inhibit expression of (I); or an antibody (Ab) that binds (II). The method involves contacting an assay system comprising purified chromatin organisation modifier (chromo) domain helicase DNA binding proteins (CHD), nucleic acids, their functionally active fragments or derivatives, with a test agent under conditions where, but for the presence of the test agent, the system provides a reference activity. The methods are useful for identifying modulators of the p53 pathway as therapeutic targets for disorders associated with defective p53 function, such as angiogenic disorders, apoptotic disorders or cell proliferative disorders, e.g. cancer. The modulators are useful as research reagents, diagnostics and therapeutics. The invention is also useful in gene therapy. The present sequence is human CHD DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to antiangiogenic pharmaceutical compositions. The compositions comprise, as active ingredient, one or more of: nucleic acid (I; ADI26740+ADI26744 and ADI26766-ADI26769) from conference of: nucleic acid (I; ADI26740+ADI26744 is induced by an anticomposition of the expression of which is induced by an angiogenic agent, or its complement or fragment; polypeptide (II; ADI26745-ADI26749 and ADI26770-ADI26773) encoded by (I), or its fragment; an antistense nucleic acid (III; ADI26750-ADI26733) able to inhibit expression of (I); or an antibody (Ab) that binds (II). The compositions are used for treating a wide range of angiogenic diseases: tumour vascularisation; retinopathy; rheumatoid arthritis; Crohn disease; atherosciecrosis; ovarian hyperstimulation; psoriasis; endometriosis associated with neovascularization; restenosis (arterial or after ballon angioplasty); overgrowth of cells in wound healing; peripheral vascular disease; hypertension; vascular inflammation; Raynaud disease; aneurysm; thrombophlebitis; lymphedema; ischaemia; angina; myocardial infarct; chronic heart disease; (congestive) cardiac insufficiency; age-related muscular degeneration and osteoporosis. GS-N3 encodes a zing finger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

A protein encoded by the cDNA may be used to screen several conversal molecules or compounds to identify a ligand that specifically binds to the protein, or to produce or purify an antibody to the protein that can be used to detect a protein in a sample or purify a natural or recombinant protein from a sample. The nucleotides may be useful for CC diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, cancer, coronary artery CC disease, hypertension, diabetes, pre-eclampsia, ischaemia - reperfusion injury, restenosis, or stroke. The cDNAs can also be used for large-scale genetic or gene expression analysis of several new nucleic acid molecules. Antibodies to the proteins encoded by the cDNAs are useful for diagnosing pre-pathologic disorders, and chronic or acute diseases associated with abnormalities in the expression, amount or distribution of the protein. The present sequence represents a cDNA of the invention that is differentially expressed in activated vascular tissue. Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly from USPTO at http.seqdata.uspto.gov/sequence.html?DocID=20020137081

The invention also discloses a high throughput method for detecting differentially expressed cDNAs in a sample. The cDNAs of the invention may have antiarteriosclerotic; cytostatic; cardiant, hypotensive; antidiabetic; gynaecological; vasotropic and cerebroprotective activities and may be used in gene therapy. The cDNAs of the invention may be used in a high-throughput methods for detecting differential expression of one or more compared.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a combination comprising a number of cDNAs that are differentially expressed in a liver treated with a toxin and are selected from any of the 514 cDNAs listed in the specification, or their complements. The combination is useful in diagnosing, staging or treating a liver disorder (e.g. billary cirrhosis, x-linked adrenoleukodystrophy, Zellweger syndrome, hepatorenal syndrome, hepatitis or hepatocarcinoma), in monitoring diagnostic and therapeutic applications, in detecting metabolic and toxicological responses, and in elucidating drug mechanism of action. This sequence represents a cDNA differentially expressed in liver tissues in response to treatment with a toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 7805 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New combination comprising a number of cDNAs that are differentially expressed in a liver treated with a toxin, useful for diagnosing, st. or treating liver disorders (e.g. biliary cirrhosis, hepatitis or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chang H,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    무
                                                                                                                                        The specification describes antisense oligonucleotides (AAX52869-X55271) directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,
diseases, pulmonary vasoconstriction, inflammation, allergic risk acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, pulmonary vasoconstriction, emphysema, chronic obstructive pulmon disease (COPD), and cancers such as leukemias, lymphomas, carcino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           acute asthma; allergy; asthma; impeded respiration; respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; colon cancer; breast cancer; lung cancer; pancreatic cancer; colon cancer; breast cancer; lung cancer; pancreatic cancer;

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-BBL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

```
The invention relates to a nucleic acid probe for measuring human gene cexpression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and concoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that thybridises under high stringency conditions to a nucleic acid molecule cexpressed in human cells or tissues. Also included are a spatially-cardiage expression (comprising a plurality of single exon nucleic acid molecule card addressable set of single exon nucleic acid molecule acid gene expression (comprising a plurality of single exon nucleic acid molecule contiguous and addressably isolatable or amplifiable from the plurality, a single exon microarray for measuring human gene expression, a wector comprising the single exon probe cited above, an ORP-encoded peptide comprising the single exon probe cited above, an ORP-encoded peptide comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid sequences (optionally with conservative amino acid substitutions), an construction of a customer desiring to measure gene expression, a method of providing the man gene expression data by subscription, and a computer-readable carded above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying cated above. The probes are used in identifying and characterising gross alternative splicing events, in detecting and characterising gross smaller genomic alterations, in priming the synthesis of nucleic acids, cor in expressing the ORP-encoded peptide. The present sequence is a human caids. The probes are used in identifying and characterising gross alternative splicing events, in detecting and characterising caids, cor in expressing the ORP-encoded peptide. The present sequence is a human caids. The probes of the probes of the synthesis of nucleic acids, cor in expressing the ORP-encoded pept
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; SEQ ID NO 23604; 80pp; English.

           CC sequences in the specification, or their complements or fragments, and CC encoding at least 8 amino acids of any of the 6888 amino acid sequences (C fully defined in the specification. The probe is a single exon probe that CC hybridises under high stringency conditions to a nucleic acid molecule CC expressed in human cells or tissues. Also included are a spatially-CC addressable set of single exon nucleic acid probes for measuring human CC gene expression (comprising a plurality of single exon mucleic acid probes cited above, where each of the plurality of probes is separately CC and addressably isolatable or amplifiable from the plurality), a single CC exon microarray for measuring human gene expression, a method of CC exon microarray for measuring human gene expression, a method of CC contiguous amino acids of any of the above- mentioned amino acid conservative amino acid substitutions), an CC isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to conservative desiring to measure gene expression, a method of providing the sund of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for

The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this pattent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 559 BP; 145 A; 163 C; 128 G; 123 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC The invention relates to isolated polynucleotide (I) and polypeptide (II) CC sequences. (I) is useful as hybridisation probes, polymerase chain creaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cueful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food consupplement. (II) and its binding partners are useful for treating disorders involving aberrant protein expression or biological activity. The colypeptide and polynucleotide sequences have applications in the growth of the produce other types of data and products dependent on DNA and consisted a for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and consisted disquences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in clectronic format directly from WIPO at CC ftp. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human osteoblast differentiation related cDNA SEQ ID NO 114.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the protein acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cancers and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-drived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC The invention relates to genes and their expression profiles are used CC for: (a) screening modulators of precursor stem cell differentiation into CC osteoblasts, or bone tissue deposition; (b) diagnosing abnormal CC deposition of bone tissue, abnormal rate of osteoblast formation or CC cited in (b), or monitoring the progression of bone tissue deposition. CC specific conditions include postmenopausal osteoporosis, glucocorticoid CC specific conditions include postmenopausal osteoporosis, glucocorticoid CC induced abnormalities in bone formation or bone loss, conditions that CC involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that CC skeletal disease linked to breast cancer, mastocytosis, Fanconi syndrome CC of throus dysplasia. The present sequence is that of an osteoblast CC differentiation associated cDNA marker of the invention. Note: The CC sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from WIPO or at fern wino, intrinhihiched not segmences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               haemostatic; thrombolytic; antiinflammatory; cytostatic; antibacterial; antifungal; antivivral; antiinflammatory; cytostatic; antibacterial; antifungal; antivivral; antidiabetic; antiasthmatic; vulnerary; antiulcer; cerebroprotective; anticonvolument; and antidepressant. The sESTs can be used for gene therapy and in vaccines. The sESTs are useful as probes for the identification and isolation of full-length cDNAs and genomic DNA molecules which correspond to the sESTs. Proteins encoded by the sESTs are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), altergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation disorders (haemophilia, thrombosis), inflammatory disorders (Crohn's disease), tumours, bacterial, fungal or viral infections, depression and psoriaesis. AAA45936 to AAA45931 represent linker variants which are given in the exemplification of the present invention

The sESTs can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic;

                                                                                                         S
                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                            38043 CDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is useful for should be sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030073623

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel isolated protein complex comprising a RING-SH 3 polypeptide and a polypeptide selected from a Gag protein, a Gag late domain, PISK, actin, myosin, Hap60, Hap70, Hap90, STMM1, STMM2A, STMM2B, VHS-UIM, a GTPase, an E2 enzyme, tsg101, a cullin, RING-SH, and a clathrin. The novel protein complex has virucide activity and can be used to treat disorders as part of a vaccine. The protein complex and composition are useful for detecting cells infected with a virus, for identifying agents having antiviral activity, and for treating viral disorders caused by retroviruses, rhabdoviruses, or filoviruses. This polymucleotide represents a DNA sequence relating to a protein comprising the RING-SH complex of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated protein complex comprising a RING-SH 3 polypeptide and another polypeptide, useful for detecting cells infected with a virus, and for treating viral disorders caused by retroviruses, rhabdoviruses,

                                                                                                                                                                                                                                                                                                                                                                                                           expressed in MYCN activated cells. Specifically, it refers to polynucleotide sequences that exhibit differential expression patterns in cells activated by the transactivator MYCN, where MYCN is a protonocogene that is amplified in neuroblastoma cells and is common in small cell lung cancers. The present invention describes these cDNA molecules as useful for in hybridisation assays to detect expression of nucleic acids (or complementary nucleic acids) in a present in a given sample, as well as for screening assays by identifying molecules or compounds that specifically bind the cDNA as a ligand and modulate function or activity. Accordingly, these compositions exhibit cytostatic activity and can also be used for gene therapy purposes. This polynucleotide sequence is a cDNA that is differentially expressed in MYCN activated cells, given in an exemplification of the invention. NOTE: This sequence does not appear in the printed specification but has been betained in electronic format from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New genes regulated by MYCN activation, useful in gene therapy, particularly for treating a subject with e.g. neuroblastoma or other cancers, or for diagnosing, staging or monitoring the treatment of the concerns of the cancers.
                                                                                                                                                                                                                                                                                                                    Sequence 3917 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to novel isolated cDNAs that are differentially expressed in MYCN activated cells. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the primer special sprinted specification, but was obtained in CD-ROM format directly
